MASTER HEALTH CHECK

✚ PACKAGES ✚

HANDE Medical Centre
Nungambakkam

— A unit of Hande Hospital —

Your health should always be the number one priority!

Regular whole body checks are essential to detect illnesses before they cause symptoms and also to identify risk factors that could complicate existing chronic illnesses. **Regular whole body checks** promote health awareness ensuring that we lead healthier life styles thereby preventing the onset of illness and the need for extra hospital expenses.

In a **preventive health check**, the Physician takes a detailed personal history and then orders relevant blood and urine tests and also an ECG, X-Ray, Ultrasonogram, Echocardiogram or Pulmonary Function Tests as deemed necessary. Finally the tests are reviewed along with a physical examination of the patient. The patient could also be seen by a Cardiologist, Urologist or Gynaecologist as the need arises.

At **Hande Hospital** various packages are available to suit an individual patient's need (details overleaf). To know more about these packages please contact 9841011390. Our Staff will guide you through the various packages and also fix the timings for the test and the Consultant's Review. You can also visit our website.
